

Keystone Connect - Quick Guide (Plain English)

What This App Does

Keystone Connect helps me find local contractor businesses fast.

I pick a location and a business type, then the app gives me matching companies.

Quick Steps

1. Enter a location, or check **Use approximate location**.
2. Pick a **Business Query** category, or choose **Manual Override** to type my own search.
3. Set the search **Radius (mi)**.
4. Click **Search**.
5. Review the results and click **website** or **map**.
6. Click **DOWNLOAD .XLSX** if I want a file of the results.

Main Options (Simple)

- **Use approximate location**: Uses device/browser location.
- **Business Query**:
 - Picking a **parent category** searches all child trades in that group.
 - **Manual Override** lets me type any search phrase.
 - **Preferred Results** shows companies I starred.
- **Radius (mi)**: How far out to search.
- **API / APIB / GGL**:
 - **API**: tighter, cleaner matches
 - **APIB**: broader than API
 - **GGL**: broadest search mode
- **PRIOR ON / OFF**:
 - **ON**: hides companies I already saw when I expand radius
 - **OFF**: shows everything
- **Get emails if available. (Slower)**:
 - Tries to retrieve business email addresses when available
- **Reset fields**:
 - Clears the current search inputs and results

Result Actions

- **Star icon**: Save or remove a company from Preferred Results.
- **Trash icon**: Remove a company from that specific query.
- **Clear results**: Clear the current visible results from the screen.

Important Notes

- Distance shown is **air distance** (straight-line), not driving distance.
- Results are not sponsored ads.
- Results are ranked by relevance first, then distance.
- Result quality depends on Google business listing data.
- Some businesses may not have website/email data available.

.xlsx Export

- Exports the results currently shown on screen.
- Includes key business fields and category section.
- UI actions like star/remove are not exported as extra columns.

If Something Looks Wrong

- If no results: try a broader search term, bigger radius, or another search mode.
- If location suggestions overlap or look stuck: refresh and try again.
- If location is blocked: allow location access in browser/site settings.
