

Keystone Connect Public Release FAQ

What this app does

Keystone Connect finds local contractor businesses by location and business query category, then lets users review and export results.

Which link should users use?

Use the current live deployment link for the web version, or the current `LATEST` package in `dist-desktop/Run` for desktop testing.

What does `API / APIB / GGL` mean?

- `API`: tighter match
- `APIB`: broader than API
- `GGL`: broadest search mode

What does `Use approximate location` do?

Uses browser/device geolocation as the search center.

What does `Manual Override` do?

Allows a custom search term and is less restrictive than category-driven search.

What does `PRIOR ON / OFF` do?

- `ON`: hides companies already seen in earlier radius expansions
- `OFF`: shows everything again

What does `Get emails if available. (Slower)` do?

Attempts to retrieve relevant company email addresses. This is slower than normal search.

What does the star icon do?

Adds or removes a company from Preferred Results.

What does the trash icon do?

Removes that company from the current query results.

What does `Reset fields` do?

Clears the current search inputs and current results.

What does `DOWNLOAD .XLSX` do?

Exports the current visible results to an Excel file.

Notes

- Distance shown is straight-line (air distance), not driving distance.
- Results are not sponsored ads.
- Results are sorted by relevance first, then distance.
- Result quality depends on Google listing quality and available profile data.

Maintainer note: keep this file current when feature names, search modes, export behavior, or distribution naming change.
