

Keystone Connect - Beta Quick Guide

Purpose

Keystone Connect helps you find local contractor businesses by location and business category using Google Places API (New), then review/export results quickly.

How To Launch

- 1) Local (Mac): open ui/Open-App.command
- 2) Hosted: open your Render URL in browser

Core Workflow

- 1) Enter Location (ZIP, City, State) OR check Use my location
- 2) Choose Business Query category (or Manual Override)
- 3) Set Radius (miles)
- 4) Click Search
- 5) Review results and click website / map links
- 6) Click Download CSV when needed

Main Options

- Use my location: fills location with your browser geolocation
- Business Query:
 - Parent category = searches all child categories
 - Manual Override = free-text query
 - Preferred Results = saved starred companies
- Radius (miles): search distance limit
- Day/Night toggle: visual theme only
- Pop out / Full size: window mode only

Results Actions

- Star icon: add/remove Preferred result
- Trash icon: mark result irrelevant for this search signature
- Clear results: clears current result list

Data Notes (Important)

- Distance shown = air distance (straight-line), not road miles
- Result quality depends on Google listings and category relevance filters
- Website/email availability depends on listing data and site accessibility

CSV Export

- Exports current visible result set
- Includes core business fields and category section
- Preferred/irrelevant UI actions are not added as extra CSV columns

Beta Testing Checklist

- Test 3 location types: ZIP, City, Use my location
- Test 3 query types: Parent category, Child category, Manual override
- Confirm: Search -> links -> CSV -> theme toggle -> popout/full size
- Log false positives/false negatives for filter tuning

Support / Troubleshooting

- If no results: broaden query term, increase radius, or try city-level location
- If location autocomplete overlaps: refresh and retest after latest deploy
- If API errors occur: verify GOOGLE_MAPS_API_KEY and Places API (New) access
