

Keystone Connect — One-Page Guide

What this app does

Keystone Connect helps you quickly find local contractor companies by location, business category, and search radius. It then gives you contact info and lets you download results to .xlsx.

How to use it

- 1 Enter a location (city, ZIP, or state), or check **Use my location**.
- 2 Pick a **Business Query** category, or use **Manual Override**.
- 3 Set **Radius (mi)**.
- 4 Click **Search**.
- 5 Review results and open **website** or **map**.
- 6 Click **Download .xlsx** when you want to export.

Main controls (plain terms)

- **API / GGL**: API = tighter/cleaner matches; GGL = broader results.
- **PRIOR ON/OFF**: ON hides companies already seen in earlier radius expansions; OFF shows everything.
- **Get emails**: tries to pull business emails from websites; slower when enabled.
- **Star**: saves a company to Preferred Results.
- **Trash**: removes a company from this specific search query.
- **Reset fields**: clears fields/results and starts fresh.

Important notes

- Distance shown is straight-line distance.
- Results quality depends on Google listing quality.
- Some businesses will not have a website or email available.
- The app supports both desktop and mobile layouts.

Best workflow for real use

- 1 Start with API + smaller radius.
- 2 If results are thin, increase radius and keep PRIOR ON.
- 3 Use GGL when you need broader discovery.
- 4 Star good companies as you go.
- 5 Export your final list to .xlsx.
